

Edwin Njoroge

Date of birth: 21/08/1990 | Gender: Male | Nationality: Kenyan | Phone: (+49) 15565539808 (Work) | Email address: edkimnjoroge@gmail.com | Website: edkimnjoroge.github.io/portfolio | LinkedIn: [edkimnjoroge](https://www.linkedin.com/in/edkimnjoroge) | Address: 71083, Herrenberg, Germany (Home)

About myself

Full-Stack Developer with 5+ years building and maintaining web applications, business systems, and SaaS platforms. Strong in backend development (PHP/CodeIgniter, Node.js, Laravel) and frontend frameworks (React, Flutter), with hands-on experience deploying and supporting production infrastructure (Linux, AWS, Oracle Cloud, DNS, SSL). Proven in full project lifecycles: from initial architecture through deployment, user onboarding, and post-launch support. Comfortable owning features end-to-end in small teams and founding environments. I build what I deploy — and I stay responsible for what happens after launch. My work spans founding-team environments and established operations: building from zero, stabilizing legacy systems, and bridging technical teams with end users. Based in Germany, available immediately.

Skills

Backend Development | Codeigniter | PHP | Laravel | Node.js | REST APIs | MySQL/MongoDB | API integration | Authentication & authorization | Server-side logic

Frontend Development | React | Flutter | Cross-platform development | Javascript | NextJS | HTML/CSS | Responsive design

Infrastructure & DevOps | Oracle Cloud | AWS | cPanel/WHM Control | Domain management | DNS | SSL/TLS | Cloudflare | Server monitoring | Security checks | Backups | CI/CD basics

Tools & Workflow | Workflow automation | n8n | RAG-based AI assistants | AI-assisted development | Git/Github

Work experience

Lead Developer & Platform Architect | Qodesystems | 01/03/2025 - 01/10/2025 | Nairobi, Kenya

- Architected and built MarkerpulseOS, a multi-tenant SaaS platform (ERP, CRM, HRM, POS) now serving live corporate clients.
- Built core platform in PHP/CodeIgniter with MySQL, tenant isolation, and configurable modules per client.
- Designed and deployed production infrastructure: Linux servers, DNS, SSL, databases, monitoring, automated backups.
- Onboarded 5+ business clients including data migration, user setup, workflow configuration, and staff training.
- Led migration of Wideoptions Melamine from legacy ERP/CRM to MarkerpulseOS: 5,000+ records, zero data loss.
- Built companion Flutter app for mobile access to the platform.
- Created technical documentation and API references for internal team and client developers.
- Occasional technical advisory on architecture decisions, deployment strategies, and infrastructure scaling [10/2025 – Present]

Full-Stack Developer | Wideoptions Melamine Limited | 20/06/2024 - 29/03/2025 | Nairobi, Kenya

- Designed and built internal ERP/CRM platform from scratch: customer management, sales, inventory, manufacturing workflows, HR modules.
- Full-stack development: Node.js backend, React frontend, MySQL database architecture.
- Scaled to 700+ customers, 50+ daily staff users.
- Migrated 5,000+ records (customers, suppliers, products, inventory) from manual/legacy processes with zero data loss.
- Deployed and maintained production environment: server setup, SSL, backups, security monitoring.
- Built user onboarding flows, role-based access control, and staff training interfaces.
- Later coordinated migration to MarkerpulseOS SaaS: data continuity, workflow preservation, staff access.

Business or sector Manufacturing

IT Infrastructure & Network Support | ByteBridge Innovations | 01/07/2023 - 01/06/2024 | Nairobi, Kenya

- Installed, configured, and supported network infrastructure for residential and commercial clients (Starlink, routers, network equipment).
- Troubleshot connectivity issues and provided after-installation technical support.
- Managed purchasing, scheduling, client communication, and delivery coordination.
- Wound down operations as retail availability expanded and reduced independent reseller demand.

Freelance Software Developer | Self-employed | 20/01/2015 - 10/06/2023 | Nairobi, Kenya

- Designed and built custom web applications, e-commerce platforms, and business systems for SMEs and individual clients.
- Full-stack development: Laravel backends, React/Flutter frontends, MySQL/MongoDB databases, REST APIs.
- Managed end-to-end project delivery: requirements gathering, architecture, development, deployment, client training, ongoing maintenance.
- Supported clients with hosting setup, domain configuration, email systems, and basic IT infrastructure.
- Built and maintain Lockdown Ice: API-driven Laravel commerce platform with Flutter companion apps (Android/iOS).

Education & Training

Bachelor of Science (B.Sc.) in Computer Science | Jomo Kenyatta University of Agriculture and Technology (JKUAT) | 01/05/2009 - 05/05/2013 | Nairobi, Kenya

Website: www.jkuat.ac.ke

German Language Course (Towards B1) | VHS Herrenberg | 28/04/2026 - Current | Stuttgart, Germany

Language Skills

Mother tongue(s): **Swahili**

	Understanding		Speaking		Writing
	Listening	Reading	Spoken production	Spoken interaction	
English	C2	C2	C2	C2	C2
